

NEURO BIOMARKERS ON YOUR MIND?

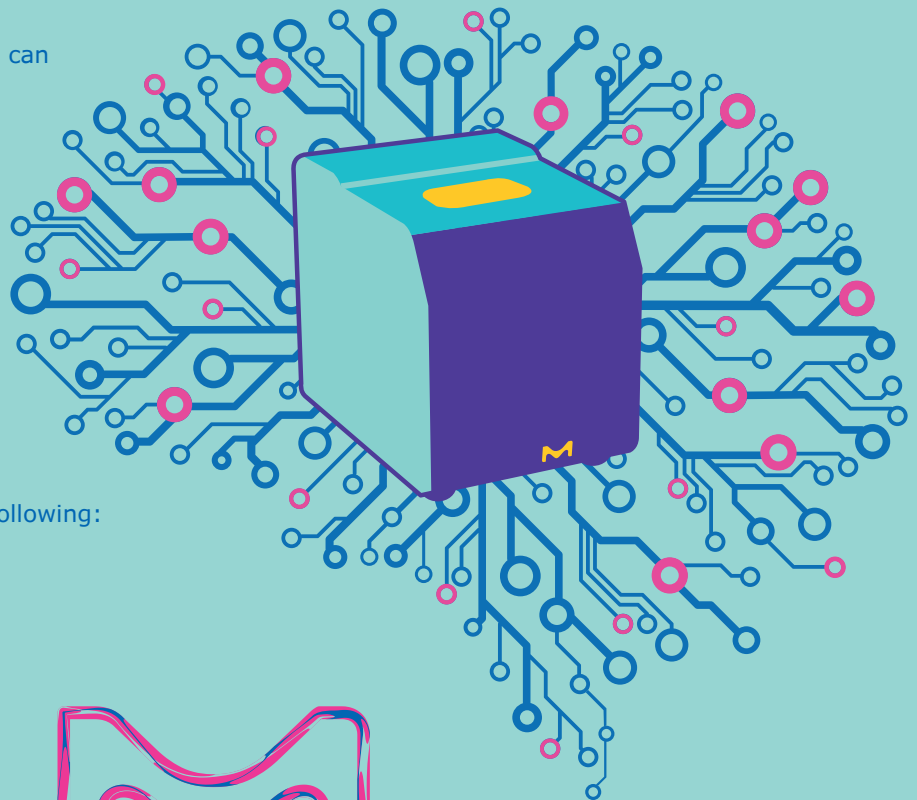

Explore using ultrasensitive immunoassays with sensitivity you can count on.

Cerebrospinal fluid (CSF) biomarkers can present a challenge in neuroscience research because CSF samples are difficult to obtain. This creates a need for blood-based biomarkers.

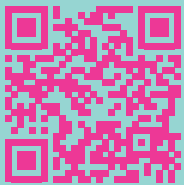

Ultrasensitive Single Molecule Counting (SMC[®]) immunoassay technology enables low-abundant biomarker measurement in a variety of biofluids such as serum, plasma, and CSF with unparalleled sensitivity.

Our newest SMC[®] kits measure the following:

- NF-L
- SNAP-25
- TDP-43
